

INTRODUCING

a new

BABY GAR

To supplement his universally acknowledged favorites of the fine=boat field comes Gar Wood's latest achievement—a sensational new 28=foot vee=bottom Baby Gar runabout, powered for more than 30 miles=an=hour with an internationally known 6=cylinder marine engine, to sell for less than \$3000.

Winning the most enthusiastic reception ever accorded any new runabout in its first year, the present 28=foot Baby Gar has established a new standard of comparison with its extremely soft and dry riding qualities together with startling beauty, thrilling speed, and unusual seaworthiness. By again utilizing this proven basic design for his newest model, Gar Wood has effected economies of production hitherto thought impossible in fast runabout production. This method has resulted in the creation of a distinctively beautiful new Baby Gar that leads the world in runabout value.

We confidently and proudly await your approval of this new Baby Gar on display for the first time at the New York Motor Boat Show January 18th. Advance information regarding this new Baby Gar and the complete Gar Wood line for 1929 gladly sent Dealers or others interested in the Gar Wood Franchise.
